

mrocon Cortex • Deployment-Mode Card

Your knowledge-base, on a wire you control.

FIVE SETUP-LINES

- 1 Install the desktop-app.
- 2 Run the Engine-Wizard — it checks your VRAM and recommends the local models you can actually run.
- 3 Point it at your first folder — the first indexed search returns within minutes.
- 4 Pick your engines: 11 providers (4 local, 7 cloud), BYO-LLM + BYOK.
- 5 Connect over MCP — Cursor, Claude Desktop, Cline, Continue, Zed, VS Code read your vault.

SEVEN SETUP-CHECKS

- ☐ VRAM check passed — recommended local model runs on your machine.
- ☐ First folder indexed; hybrid-search returns (full-text + vector + metadata, RRF-fused).
- ☐ Vault encrypted AES-256, bound to its deployment-mode at creation.
- ☐ Engine / provider-switcher configured (local + cloud fallbacks).
- ☐ MCP bridge live to your daily-driver editor.
- ☐ Plain-English query returns the right file (name / quote-in-a-pdf / meeting-date).
- ☐ Zero-Trust verified — keys never leave the vault.

TWO THRESHOLDS — CHOOSE YOUR DEPLOYMENT-MODE

Air-gapped

Vault bound to a strictly-local engine at creation. The cloud-path does not exist — architecture-protected, not a toggle.

Hybrid

Local + cloud engines. You route per question.

mrocon Cortex • mrocon.at/cortex • 14 days, no card •

One-time license, no subscription. No email-gate. No upsell.

Less hunting. More finding.

Point it at one folder. Ask in plain English. Let the vault be the part that's yours.
