

TrackID Builder · Build-Card

Playlist in. Track-IDs out. Frame-accurate.

FIVE SETUP-LINES

- 1 Install (desktop-only, no keys, one-time license).
- 2 Drop your playlist-file in — .cue, .m3u and most DJ formats; the parser handles the inconsistencies.
- 3 Pick a template (27 fonts × 9 styles = 243 combinations; per-track override available).
- 4 Click build → Fusion-compositions appear at the correct timecodes in DaVinci Resolve.
- 5 Need a change later? Change one setting, click rebuild.

SEVEN PRE-BUILD CHECKS

- ☐ Playlist-file parses — track-list + timecodes read correctly.
- ☐ DaVinci Resolve project open, recording on the timeline.
- ☐ Template chosen (logo-left / artist-image-right layout set).
- ☐ Artist-images mapped per track (or a fallback set).
- ☐ Timecodes confirmed frame-accurate against the recording.
- ☐ Safe Rebuild on — TIB only touches nodes it created; manual comps untouched.
- ☐ Session-state persistence confirmed (survives a crash).

ONE THRESHOLD

Frame-accurate placement. Every track-change lower-third lands on the exact frame — or it's not a build you'd ship to a client.

TrackID Builder · trackidbuilder.com · 7 days free, then one-time license ·

Free card. No email-gate. No upsell.

Less clicking. More mixing.

Drop the playlist in. Pick the template. Let the rebuild handle the client's next change.
