FACELESS YOUTUBE AUTOMATION HQ

Talk to me · Voice-Setup Card

Dictation that just works — your keys, your machine.

FIVE SETUP-LINES

1. Install the pill (Windows or Android).
2. Paste the BYOK keys you already have — or run the included demo keys for an evening.
3. Configure your hotkey (it's yours to set).
4. Translation is on by default — set your output language.
5. Voice Chat is off by default — turn it on when you want it.

SEVEN CHECKS

- [ ] Hotkey fires reliably from any app.
- [ ] Dictation latency feels instant on routine prompts.
- [ ] At least one provider key validated in the Trust-Pool.
- [ ] Multi-key rotation handles a rate-limit without you noticing.
- [ ] Translation output-voice set to your target language.
- [ ] Zero-Trust confirmed: keys encrypted, never leave your machine.
- [ ] Voice Chat preset chosen (only if enabled).

ONE THRESHOLD

Sub-second latency on routine prompts. Clear it and dictation feels instant; miss it and you'll feel the lag. That's the bar.

Talk to me · **talktome.studio** · 7 days, no card · Free. No email-gate. No upsell.

Less typing. More talking.

Bring the keys you already have. Turn on what you need. Leave the rest off. Dictation should just work.
